COURSE OVERVIEW

Over the past two decades, minimally invasive surgical approaches have become well established as improved options for many patients needing surgical therapy. Some advanced minimally invasive surgery has become less frequently utilized due to the number of obstacles, including a substantial learning curve and volume requirement. This program is designed to provide information about new frontiers in minimally invasive surgery and to look critically at the currently utilized approaches, as well as those on the horizon. Our internationally renowned course faculty will lend their expertise to the areas highlighted at the symposium. Audience interaction and participation are strongly encouraged.

TARGET AUDIENCE

General surgeons, colorectal surgeons, cardiothoracic surgeons, vascular surgeons, trauma surgeons, bariatric surgeons, gynecologists/oncologists, gynecologists, gastroenterologists, nurses, and other allied healthcare professionals.
